

ABSTRACT OF THE DISCLOSURE

A data copying method includes connecting a data copying device to a server via a network, selecting first data from a database of the server, downloading
5 the first data into the data copying device, writing the downloaded first data into a first magnetic memory, setting a second magnetic memory in the data copying device, and writing second data into the second magnetic memory by setting the first and second
10 magnetic memories close to each other to magnetically transfer the first data to the second magnetic memory.
